

Foster Forge Farm School

Albemarle County, VA

Turn Lanes Analysis and Study Report

May 04, 2022

Revised May 10, 2022

Trip Generation Report for Foster Forge Farm School

May-10-2022

Assumptions:

- 70% of students are coming from the city (northbound in the AM), and 30% are coming from the county (southbound in the AM).

There is 30% of the students = 18 students southbound to the school using parents vehicles. (right turn)
 There is 30% of the staff = 4 staff persons southbound to the school using vehicles. (right turn)
 There is 35% of the students = 21 students northbound to the school using parents vehicles. (left turn)
 There is 35% of the students = 21 students northbound to the school using School Bus. (left turn)
 There is 70% of the staff = 10 staff persons northbound to the school using vehicles. (left turn)

	#Of Students
School Bus	21
Parents Vehicles	39

				1	2	3	1

Note: ITE Code 522 shows for vehicles only, it doesn't differentiate between bus and normal car. Therefore, we assume the bus has 4 trips during peak hours per day, 2 in the morning, and 2 in the evening.

				0	1	1	0

FFF school is a private school without large building maintenance and food preparation that makes it unique facility with actual planned pattern of use as shown below.

Existing Traffic Data

Growth factor = 0.8% per year, and AADT 2020= 6000 VPD
Using this equation, the estimated AADT at 2025= 6244 VPD

$$CAGR = \left(\frac{V_{final}}{V_{begin}} \right)^{1/t} - 1$$

CAGR = compound annual growth rate
V_{begin} = beginning value
V_{final} = final value
t = time in years

Appendix A

Land Use 522

Middle School/Junior High School

Description

A middle or junior high school serves students who have completed elementary school and have not yet entered high school. Both public and private middle schools/junior high schools are included in this land use. Elementary school (Land Use 520), high school (Land Use 530), private school (K-8) (Land Use 534), private school (K-12) (Land Use 536), and charter elementary school (Land Use 537) are related uses.

Additional Data

The percentage of students at the sites who were transported to school via bus varied considerably. Due to the varied transit and school bus usage at these sites, it is desirable that future studies include additional detail on the percentage of students who were bused to school and the percentage that were dropped off and picked up.

Because the ratio of floor space to student population varies widely among the schools surveyed, the number of students may be a more reliable independent variable on which to establish trip generation rates.

Time-of-day distribution data for this land use are presented in Appendix A. For the two general urban/suburban sites with data, the overall highest vehicle volumes during the AM and PM on a weekday were counted between 7:00 and 8:00 a.m. and 5:00 and 6:00 p.m., respectively.

The sites were surveyed in the 1990s, the 2000s, and the 2010s in California, Connecticut, Delaware, Florida, Minnesota, Nebraska, Oregon, Pennsylvania, and Tennessee.

Source Numbers
