ADMINISTERING MEDICINES TO STUDENTS

Medications Prescribed for Individual Students

Employees of Charlottesville City School Board may give medication prescribed for individual students only pursuant to the written order of a physician, physician assistant, or nurse practitioner and with written permission from the student's parent or guardian. Such medicine must be in the original container and delivered to the principal, school nurse, or school division designee by the parent or guardian of the student.

Nonprescription Medications

Employees of Charlottesville City School Board may give nonprescription medication to students only with the written permission of the parent or guardian. Such permission shall include the name of the medication, the required dosage of the medication, and the time the medicine is to be given. Such medicine must be in the original container and delivered to the principal, school nurse, or school division designee by the parent or guardian of the student.

Self-Care and Self-Administration of Medication

Each enrolled student who is diagnosed with diabetes, with parental consent and written approval from the prescriber, is permitted to

- carry with him and use supplies, including a reasonable and appropriate short-term supply of carbohydrates, an insulin pump, and equipment for immediate treatment of high and low blood glucose levels, and
- self-check his own blood glucose levels on school buses, on school property, and at school-sponsored activities.

A School Board employee, as defined in Va. Code § 22.1-274.E, who is a registered nurse, licensed practical nurse, or certified nurse aide and who has been trained in the administration of insulin, including the use and insertion of insulin pumps, and the administration of glucagon may assist a student who is diagnosed with diabetes and who carries an insulin pump with the insertion or reinsertion of the pump or any of its parts. Prescriber authorization and parental consent shall be obtained for any such employee to assist with the insertion or reinsertion of the pump or any of its parts. Nothing in this policy requires any employee to assist with the insertion or reinsertion of the pump or any of its parts.

Students may be permitted to carry and self-administer other medications when the following conditions are met:

- Written parental permission for self-administration of specified non-prescription medication is on file with the school.
- The non-prescription medication is in the original container and appropriately labeled with the manufacturer's directions.
- The student's name is affixed to the container.
- The student possesses only the amount of non-prescription medicine needed for one school day/activity.

Sharing, borrowing, distributing, manufacturing or selling any medication is prohibited. Permission to self-administer non-prescription medication may be revoked if the student violates this policy and the student may be subject to disciplinary action in accordance with the Standards of Student Conduct.

Self-Administration of Asthma Medications and Auto-Injectable Epinephrine

Students with a diagnosis of asthma or anaphylaxis, or both, are permitted to possess and self-administer inhaled asthma medications or auto-injectable epinephrine, or both, as the case may be, in accordance with this policy during the school day, at school-sponsored activities, or while on a school bus or other school property. A student may possess and self-administer asthma medication, or auto-injectable epinephrine, or both, when the following conditions are met:

- Written parental consent that the student may self-administer inhaled asthma medications or auto-injectable epinephrine, or both, is on file with the school.
- Written notice from the student's health care provider is on file with the school, indicating the identity of the student, stating the diagnosis of asthma or anaphylaxis, or both, and approving self-administration of inhaled asthma medications or auto-injectable epinephrine, or both, that have been prescribed for the student; specifying the name and dosage of the medication, the frequency in which it is to be administered and the circumstances which may warrant its use; and attesting to the student's demonstrated ability to safely and effectively self-administer the medication.
- An individualized health care plan is prepared, including emergency procedures for any life-threatening conditions.
- There is a consultation with the student's parent before any limitations or restrictions are imposed on a student's possession and self-administration of inhaled asthma medications and auto-injectable epinephrine, and before the permission to possess and self-administer inhaled asthma medications and auto-injectable epinephrine at any point during the school year is revoked.
- Self-administration of inhaled asthma medications and auto-injectable epinephrine is consistent with the purposes of the Virginia School Health Guidelines and the

Guidelines for Specialized Health Care Procedure Manual, which are jointly issued by the Virginia Department of Education and the Virginia Department of Health.

- Information regarding the health condition of the student may be disclosed to school board employees in accordance with state and federal law governing the disclosure of information contained in student scholastic records.

Permission granted to a student to possess and self-administer asthma medications or auto-injectable epinephrine, or both, will be effective for a period of 365 calendar days, and must be renewed annually. However, a student's right to possess and self-administer inhaled asthma medication or auto-injectable epinephrine, or both, may be limited or revoked after appropriate school personnel consult with the student's parents.

Epinephrine

Pursuant to an order or standing protocol issued by the prescriber within the course of his professional practice, any school nurse, School Board employee, employee of a local appropriating body or employee of a local health department who is authorized by a prescriber and trained in the administration of epinephrine may possess epinephrine and administer it to any student believed to be having an anaphylactic reaction.

Naloxone

Charlottesville City Schools wishes to prevent opiate-related overdose deaths by making Naloxone available in its schools. Naloxone, commonly known by the brand-name Narcan®, is a medication that is administered by intra-nasal spray or injectable form to students believed to be experiencing, or about to experience, a life-threatening opioid overdose.

School nurses or other school board staff members may possess and administer naloxone or other opioid antagonist used for overdose reversal, provided that they have completed the necessary training program.

Regulation

The superintendent shall develop a regulation for administration of medicines to students. The regulation shall include provisions for the handling, storage, monitoring, documentation and disposal of medication.
