Proposed infrastructure improvements

Carson – Midlothian & North Anna – Midlothian 500kV Electric Transmission Rebuild Projects

At Dominion Energy, we provide the reliable, affordable, and increasingly clean energy that powers your every day. You are receiving this postcard to let you know about infrastructure upgrades you may notice in your community to ensure grid reliability for customers.

This proposed project will rebuild the existing 500 kilovolt (kV) electric transmission lines in the same right of way corridor between our Carson, Midlothian, and North Anna substations. These lines are approaching the end of their service lives and must be rebuilt to accommodate increased generation supply and customer needs. This project will require approval by the Virginia State Corporation Commission (SCC), and the application will be filed in August 2026. The application process has several opportunities for public comment. Please see our website for details.

It is planned to keep the current 500 kV lines in service during construction. To achieve this, and to optimize existing right of way for future transmission development, Dominion Energy proposes to **partially rebuild the existing 230 kV line between Midlothian Substation and Oilville at Broad Street.**

For this section of the project, the 500 kV and 230 kV lines will share the same structures.

Trees and vegetation must be cleared from the existing easement along the entire corridor because the existing 500 kV lines will be in service during construction. Because some locations within the existing corridor are uncleared today, trees, vegetation, and unapproved encroachments must be fully removed. As soon as permits are obtained (currently targeting winter 2026–2027), tree clearing activities within the existing easement and selective danger tree cutting outside the easement will begin.

There will be public meetings this spring to gather your important input about the rebuild projects. Thank you for your participation and patience as we prioritize this critical infrastructure in your community.
