\* A recommendation to the Policy Board and/or vote is expected for this item

**Upcoming Meetings:**

MPO Policy Board (4<sup>th</sup> Wednesday): September 22<sup>nd</sup> at 4pm

MPO Tech Committee (3<sup>rd</sup> Tuesday): November 16<sup>th</sup> at 10am

### **NOTICE of ELECTRONIC MEETING:**

This meeting of the Charlottesville-Albemarle Metropolitan Planning Organization Technical Committee is being held pursuant to *Code of Virginia* § [2.2-3708.2](#), which allows a public body to hold electronic meetings when the locality in which it is located has declared a local state of emergency, and the catastrophic nature of the emergency makes it impracticable or unsafe to assemble a quorum in a single location, and the purpose of the meeting is to provide for the discharge of its lawful purposes, duties, and responsibilities.

This meeting is being held via electronic video and audio means through Zoom online meetings and is accessible to the public with close captioning and there will be an opportunity for public comment during that portion of the agenda.

Notice has been provided to the public through notice at the TJPDC offices, to the media, web site posting and agenda.

The meeting minutes will reflect the nature of the emergency, the meeting was held by electronic communication means, and the type of electronic communication means by which the meeting was held.

A recording of the meeting will be posted at [www.tjpd.org](http://www.tjpd.org) within 10 days of the meeting.

**MPO Technical Committee Meeting**  
Draft Minutes, July 20, 2021

| VOTING MEMBERS & ALTERNATES          |   | STAFF                          |   |
|--------------------------------------|---|--------------------------------|---|

| Jeanette Janiczek, Charlottesville   | x | Sandy Shackelford, TJPDC       | x |
| Rory Stolzenberg, Charlottesville PC | x | Lucinda Shannon, TJPDC         | x |
| Kevin McDermott, Albemarle           | x | Gretchen Thomas                | x |
| Dan Butch, Albemarle                 | x |                                |   |
| Tim Keller, Albemarle PC             | x | <b>NON-VOTING MEMBERS</b>      |   |
| Chuck Proctor, VDOT                  | x | Tony Cho FTA                   |   |
| Stacy Londrey, VDOT (alternate)      |   |                                |   |
| Christine Jacobs, TJPDC              | x |                                |   |
| Stephen Johnson, Jaunt               | x | <b>GUESTS/PUBLIC</b>           |   |
| Bill Palmer, UVA                     | x |                                |   |
| Patrick Clark, UVA (alternate)       |   |                                |   |
| Juwhan Lee, CAT                      | x |                                |   |
| Wood Hudson, DRPT                    | x |                                |   |
| Sara Pennington, Rideshare           | x |                                |   |
| Richard Duran, FHWA                  |   |                                |   |
| Jeanette Janiczek, Charlottesville   | x |                                |   |

**Note:** The City of Charlottesville has declared a local state of emergency due to the COVID-19 pandemic and the nature of this declared emergency makes it impracticable or unsafe for the Thomas Jefferson Planning District Commission to assemble in a single location in the city. This meeting was held utilizing electronic virtual communication with the Zoom software application, and in accordance with virtual meeting provisions contained in Code of Virginia § [2.2-3708.2](#). A recording of the meeting was made available to the public on July 20, 2021 at <https://www.youtube.com/watch?v=akg0-qNwJu0>.

**1. CALL TO ORDER:**

The MPO Technical Committee Chair, Rory Stolzenberg, presided and called the meeting to order at 10:04 a.m. Jessica Hersh-Ballering took attendance by roll call, and certified that a quorum was present. Mr. Stolzenberg read the Notice of Electronic Meeting and Commissioner and Public Protocol.

**2. MATTERS FROM THE PUBLIC:**

- a. **Comments by the Public:** None
- b. **Comments provided via email, online, web site, etc.:** None

### **3. APPROVAL OF DRAFT MEETING MINUTES:**

**Motion/Action:** Christine Jacobs said in the info regarding the date the meeting was posted needs to be changed from March to the May date. On a motion by Chuck Proctor, seconded by Tim Keller, the committee unanimously approved the minutes, with the changes noted, of the May 24, 2021 meeting.

### **4. ELECTRONIC MEETING POLICY:**

Ms. Shackelford presented the remote meeting policy to the board for their adoption. Ms. Jacobs moved to adopt the policy as presented with a second from Kevin McDermott. The motion was passed unanimously.

### **5. SMART SCALE APPLICATION RECOMMENDATIONS (MINUTE 0.00):**

Ms. Shackelford reviewed the timeline of the application process and reviewed the projects to be considered. She also presented the projects recommended by Staff.

**Motion/Action:** After much discussion, a motion was made by Kevin McDermott that the four projects recommended by Staff (the District Avenue Roundabout, Rivanna River Bike/Ped Crossing, Avon Street Crossing and Fifth Street Crossing projects), get forwarded to the Policy Board for the MPO's Smart Scale projects for consideration. There will be public engagement on all projects but there will be additional public engagement with the District Avenue project. Jeanette Janiszcek seconded the motion. The motion passed with Wood Hudson abstaining.

### **6. ELECTRIC VEHICLE REPORT (MINUTE 1:06:20):**

Lucinda Shannon shared her Electric Vehicle (EV) Charging Station Study. The committee concurred that the recommendations were on the "general" side and that there needs to be more specific recommendations. Mr. Hudson shared that there may be funds to leverage some resources and share this link in the chat: <https://www.deq.virginia.gov/get-involved/topics-of-interest/volkswagen-settlement-agreement>

Ms. Shackelford said the budget only allowed for a more general study. Mr. Stolzenberg and Ms. Janiszcek said that this is a good start, but the technology is moving so quickly, they do not recommend more money be spent on this because they seem to think the private sector will be taking the lead on it.

Mr. McDermott passed on the study to a staff member at Albemarle stating he may have more specific thoughts on it.

### **7. RIDESHARE UPDATES (MINUTE 1:32:44):**

**AFTON EXPRESS:** Sara Pennington reported on the new Afton Express, a transit service that runs from Staunton/Fishersville/Waynesboro to Charlottesville. The service will launch in September and the fee will be free for the entire month. For additional information, visit the website at [www.aftonexpress.org](http://www.aftonexpress.org).

Mr. Johnson said the Crozet Connect and the Afton Express have many of the same stops on their route.

RIDESHARE: Ms. Pennington reported on the Rideshare promotions, including the Afton Express, Try Transit/Rideshare Week, Telework, Earth Week, and Clean Commute/Bike Month.

Rideshare is always looking for community partners and ways to work to weave in existing programs. They are seeking outside help to make sure Rideshare is positioned in the best possible way through a marketing research and implementation plan.

She shared that there is a Rideshare app in the App Store and encouraged folks to download it and start using it.

**8. MPO UPDATES (MINUTE 1:47:16):**

Ms. Shannon reported on the updated CAMPO Public Engagement Plan, required for each MPO.

Mr. Shannon also gave an explanation of and an update on the Route 29 Corridor study.

**9. ROUNDTABLE DISCUSSION: TABLED DUE TO TIME CONSTRAINTS, WITH TWO EXCEPTIONS (MINUTE 1:52:32)**

Mr. Lee said CAT is launching their new routes. There will be a meeting tomorrow (July 21, 2021) at 6 p.m. (virtual) to report on them.

Ms. Janiszcek said there will be a virtual meeting regarding the Belmont Bridge on August 11 from 6 – 8 p.m. <https://www.belmontbridge.org/2021/07/12/virtual-community-information-session-aug-11-at-6-pm/>

**10. MATTERS FROM THE PUBLIC (MINUTE 1:54:32): None.**

**ADJOURNMENT:** Mr. Stolzenberg adjourned the meeting at 12:12 p.m.

## Memorandum

**To:** MPO Tech  
**From:** Sandy Shackelford, Director of Planning & Transportation  
**Date:** September 14, 2021  
**Reference:** SMART SCALE Round 5 Stakeholder Engagement

### Purpose:

The CA-MPO has adopted a new process for the development of SMART SCALE project applications that emphasizes stakeholder engagement as projects are developed. The MPO Policy Board voted to pursue four projects at their meeting in July, identifying the Rivanna River Bike and Pedestrian Crossing as the project that would most benefit from additional engagement via a stakeholder advisory group.

### Background:

The next step in the process that has been developed by the CA-MPO will be to identify a stakeholder advisory group to inform the development of the project. CA-MPO staff has drafted the following list of potential stakeholders:

- VDOT
- City of Charlottesville Public Works
- County of Albemarle Transportation Planning
- City of Charlottesville Parks and Recreation
- County of Albemarle Parks and Recreation
- Pantops Community Advisory Committee
- Woolen Mills Neighborhood Association
- Rivanna Conservation Alliance
- Woolen Mills Development
- State Farm Property
- CAT
- Rivanna Water and Sewer Authority
- Citizen Representative
- Citizen Representative
- CTAC Liaison

The stakeholder advisory committee will meet monthly. The meetings will be open to the public, and there will be an established time at the end of each meeting for comments or questions from the general public.

The stakeholder advisory group will help CA-MPO prioritize the factors that should be considered and evaluate proposed alternatives against the identified priorities. CA-MPO staff has drafted a list of factors that will need to be considered and evaluated as an application is developed:

- ADA Accessibility
- Trail connectivity
- Utility impacts
- Floodplain
- Right-of-way impacts
- Aesthetics
- Cost
- Public impacts

**Recommendation:**

Staff will be reviewing the proposed list of stakeholders and factors with CTAC at their meeting on September 15<sup>th</sup>, and is requesting feedback from MPO Tech. Staff will be asking the Policy Board to approve the stakeholder advisory group list at their meeting on September 22<sup>nd</sup>.

If there are any questions or comments, please contact Sandy Shackelford at [sshackelford@tjpd.org](mailto:sshackelford@tjpd.org).

# VDOT Culpeper District Project Pipeline

## Albemarle County

*August 4<sup>th</sup>, 2020*

### Agenda

1. Introductions / Goal of Today's Meeting
2. VDOT Project Pipeline
3. Study Scope
4. Work Performed to Date
5. Discussion
6. Next Steps

## Goal of today's meeting is to:

- Explain the Project Pipeline
- Provide an overview of work completed to date
- Gather Stakeholder comments and discuss focus areas

## Statewide Initiative to focus on solutions to the identified VTrans Mid-Term needs with a Performance Based Planning Approach

- Three-phase process to assess network needs, develop solutions, and identify funding sources
- **First Phase: Initial analysis to diagnose needs**
  - Inputs: Traffic volumes, crash data, site visits, stakeholder input, etc.
  - Outcome: Existing conditions and preliminary alternatives
- **Second Phase: Refine and perform alternative analyses**
  - Inputs: First phase data, future volumes, land-use, stakeholder input, public outreach etc.
  - Outcome: Future conditions and preferred alternative selection
- **Third Phase: Detailed concepts and estimates of preferred alternative**
  - Inputs: Design standards, Location & Design, Environmental, ROW, and Utilities
  - Outcome: Final concepts and estimates and application for funding (SMART SCALE, RS, TAP, Regional Funding Etc.)

## Overview:

- Corridor congestion and safety performance analysis
- Assess VTrans Mid-Term Needs
- Develop preliminary alternatives based on existing conditions

## Study Intersections:

- US 250/Hansen Road
- US 250/Rolkin Road
- US 250/State Farm Blvd
- US 250/Pantops Mountain Road
- US 250/Hilton Crossover
- US 250/Peter Jefferson Pkwy
- US 250/Hansens Mountain Road

- VTrans needs review
- Site Visit
- Crash data analysis
- Bike/Ped accommodations review and assessment
- Literature Review: Studies, Comprehensive Plans, planned projects
- Traffic counts (on-going)

- Priority 1 / 2 Corridor
- Priority is determined by but not limited to:
  - Volumes, crash data, travel times, land use, reliability, etc.
- Urban Development Area

# Safety Summary

## Total Crashes and Safety Needs

- Safety need between Hansen and Rolkin Road (PSI Rank 17)
- Safety need between Pantops Mountain Rd and Peter Jefferson Pkwy (PSI Rank 13)
- High concentration of angle and injury related crashes at State Farm Blvd and Hilton Crossover
- Rear-end crashes related to congestion. May be somewhat mitigated by Traffic Signal Synchronization and future Diverging Diamond at interchange

### Albemarle/Richmond Rd Crash Density

#### All Crashes

#### Number of Crashes By Type

#### Rear-End Crashes

#### Angle Crashes

#### Lane Departure Crashes

#### Injury Crashes

# Safety Summary

## Equivalent Property Damage (EPDO) Intersection Totals

Crashes weighted based on crash severity SMART SCALE KABCO Scale

| KABCO | Description              | Weight |
|-------|--------------------------|--------|
| K     | Fatal                    | 85     |
| A     | Suspected Serious Injury | 85     |
| B     | Suspected Minor Injury   | 10     |
| C     | Possible Injury          | 5      |
| O     | Property Damage Only     | 1      |

Crashes grouped based on functional area of intersection

Figure 1: Functional and Physical Areas of an Intersection

## Pedestrian Safety Action Plan (PSAP) 2.0

- Priority 2 (Top 1%) corridor
- Ped Fatality near Hansen Rd (2014)
- Ped Injury near Hilton Crossover (2014)

## Identified VTrans Needs

- UDA – Bike/Ped Infrastructure
- UDA – Transit

## Bike/Ped Facilities Overview

- Westbound US 250
  - 50% Sidewalk Coverage
    - 100% with <5' Buffer
- Eastbound US 250
  - 15% Sidewalk Coverage
    - 100% with <5' Buffer
- Intersections
  - 4 Signalized Crossings
  - 100'+ Crossing Distance on US 250
    - Refuges provided at State Farm Blvd
    - Most don't have pedestrian signal equipment

Traffic Signal Synchronization  
Completed 2020

Diverging Diamond On-going  
Construction

Ongoing High-density  
residential development

Stakeholder Discussion/Notes

## Overview:

- Corridor congestion and safety performance analysis
- Assess VTrans Mid-Term Needs
- Develop preliminary alternatives based on existing conditions

## Study Intersections:

- US 250/Route 22 (Louisa Road)
  - Includes Slip Lane from Route 22 onto US 250 Westbound
- US 250/N Milton Road

- VTrans needs review
- Site Visit
- Crash data analysis
- Bike/Ped accommodations review and assessment
- Literature Review: Studies, Comprehensive Plans, planned projects
- Traffic counts (on-going)

- US 250 and Route 22 a Priority 1 / 2 intersection
- Priority is determined by but not limited to:
  - Volumes, crash data, travel times, land use, reliability, etc.
- Identified Safety Needs at both intersections

# Safety Summary

## Total Crashes and Safety Needs

- Safety need at US 250 and Route 22 (PSI Rank 7)
- Rear-end crashes due to stop-and-go traffic caused from both traffic signals
- Most severe crashes associated with rear-ends traveling eastbound on US 250
  - Majority occur between 3:30 PM and 5:30 PM

# Safety Summary

## Equivalent Property Damage (EPDO) Intersection Totals

Crashes weighted based on crash severity SMART SCALE KABCO Scale

| KABCO | Description              | Weight |
|-------|--------------------------|--------|
| K     | Fatal                    | 85     |
| A     | Suspected Serious Injury | 85     |
| B     | Suspected Minor Injury   | 10     |
| C     | Possible Injury          | 5      |
| O     | Property Damage Only     | 1      |

Crashes grouped based on functional area of intersection

Figure 1: Functional and Physical Areas of an Intersection

High volume of heavy vehicles  
observed

Heavy Vehicle Truck Parking

US 250 Shared Use Path  
Planned?

Stakeholder Discussion/Notes

- Finalize crash analysis
- Process traffic counts
- Perform existing condition analysis
- Develop preliminary alternatives
- September stakeholder meeting

# 1.0 INTRODUCTION

US 29 serves as a gateway between Greene and Albemarle Counties and as a National Highway System route facilitating regional, state, and interstate travel. As development changes the character and travel demand along US 29, investments are needed to ensure the continued safe and comfortable travel for all roadway users. The Virginia Department of Transportation (VDOT) is using the public engagement process and analyzing present conditions and future plans to develop a series of feasible transportation options for an approximately six-mile section of Seminole Trail (US 29) as it runs through Greene and Albemarle County.

## The Corridor

The study corridor includes US 29 between Deerfield Drive in Greene County and Airport Road in Albemarle County (**Figure 1**). VDOT classifies US 29 as a principal arterial throughout the state and falls within the National Highway System (NHS). US 29 serves as one of three NHS roadways in the Charlottesville vicinity, running north-south between the Commonwealth's two major north-south interstates: I-81 and I-95. Long-term traffic volumes are projected to grow along US 29 due to planned developments and associated population growth.

## The Study

Through the US 29 corridor study, VDOT will engage Greene County, Albemarle County, and other stakeholders to evaluate automobile, transit, bicycle, and pedestrian travel conditions along the US 29 corridor. The study will assess future travel projections and development patterns and identify

### KEY TERMS>>

- **Principal Arterial:** In urban areas, these roads serve the major activity centers of a metropolitan area and provide continuity for major rural corridors to accommodate trips entering and leaving an urban area.
- **Minor Arterial:** These roads include all arterials not classified as principal arterials, provide more land access than principal arterials, and connect lower speed, lower volume roadways with higher speed, higher volume principal arterials.
- **Major Collector:** Major collectors provide land access and traffic circulation within residential neighborhoods, commercial, and industrial areas. They connect traffic from local roads with the arterial system.
- **National Highway System (NHS):** This is the network of strategic highways within the United States that serves major airports, ports, rail or truck terminals, railway stations, pipeline terminals, or other strategic transport facilities.

transportation solutions to help meet the study's vision and goals.

The study vision for US 29 is to provide safe travel and adequate capacity for all uses and users of the roadway. The study goals include:

1. **Improve safety and comfort**
2. **Manage congestion**
3. **Increase multimodal usability and accessibility**
4. **Support future growth**
5. **Support economic development**

## Study Stakeholders

This study is supported by a stakeholder group made up of representatives from the Albemarle County, Greene County, the Thomas Jefferson Planning District Commission (TJPD), Charlottesville Area Transit (CAT), and Jaunt.

## Public Engagement

The community is being engaged throughout the project through online surveys, the project website, and a series of public meetings. VDOT and TJPDC has reached out to the following community groups and neighborhood organizations:

- Charlottesville-Albemarle Airport
- Hollymead Town Center
- National Ground Intelligence Center (NGIC)
- University of Virginia (UVA) Research Park

## This Memorandum

This document discusses existing and future 2045 no-build conditions along the full length of the corridor through a variety of sources, including land use data, transportation data, transit ridership information, and crash history. The data are complemented by input received from stakeholders, key community groups, and members of the public through meetings and surveys. The information from the data analysis and stakeholder input will inform the measures that will be used to evaluate alternative solutions later in the study process.

## 2.0 LAND USE CONTEXT

This section summarizes the approach and findings of the land use context analysis. The material below discusses existing land use patterns and future land use trends along the study corridor.

### 2.1 Existing Land Use

The US 29 corridor is a diverse area that serves as the gateway between Greene and Albemarle Counties and the surrounding region. US 29 serves an important role as an east-coast US highway, connecting regional residents, commuters, and travelers alike to statewide destinations like Northern Virginia, Charlottesville, and Danville, and out-of-state destinations like Maryland or Florida. Major activity centers along the corridor include University of Virginia Research Park, Charlottesville-Albemarle Airport, Hollymead Town Center, and National Ground Intelligence Center. Important activity centers near the study area include Greene Lake State Park and Preddy Creek Trail Park.

**Figure 2** summarizes existing land uses along the corridor.

#### Existing Land Use Data

2019 parcel-level zoning data were obtained from Albemarle County and Greene County. These data include each parcel's land use code.

#### Existing Land Use

The land use mixes along US 29 contributes greatly to the corridor's character. Traveling along US 29 from the study corridor's northern terminus

at Deerfield Drive to its southern terminus at Airport Road, it is possible to observe a range of land use contexts. Rural landscape, residential neighborhoods, industrial parks, and numerous planned developments to come can be found along the length of the corridor.

The US 29 corridor comprises a mix of land uses, with much of the larger surrounding area dedicated to rural land uses. North of the Albemarle-Greene County line, land is primarily zoned residential and highway commercial. South of the county line in Albemarle County, land is mainly rural until Austin Drive. Residential zoning is concentrated on the west side of US 29 from Austin Drive to the Rivanna River, while a mix of industrial, commercial, and planned residential zoning exists on the east side. Much of the area south of the Rivanna River is reversed from its zoning to the north, with industrial and planned industrial zoning on the west side of US 29. Planned mixed-use zoning is located south of the Rivanna River on the east side of US 29.

Two informal boundaries exist along the corridor – one being the Albemarle-Greene County line, separating rural uses to the south from residential and commercial to the north – and the other being the Rivanna River, separating rural uses to the north from the denser development to the south.

#### Activity Generators

**Figure 3** shows various activity generators along US 29. These include:

- Schools: University of Virginia (UVA) Research Park
- Transportation: Charlottesville-Albemarle Airport
- Shopping destinations: Hollymead Town Center (south of study area)
- Government institutions: National Ground Intelligence Center (NGIC)

Figure 2 Existing Land Use

Figure 3 Activity Generators

Source: Kittelson 2021

## 2.2 Future Land Use

As a significant highway for regional, statewide, and national travel, the number of roadway improvement and development projects along US 29 have been trending upward. **Figure 4** identifies the different planned developments bringing diverse land uses to the corridor.

### Future Land Use Data

Future land use data were obtained from members of the study stakeholder group, including Albemarle and Greene Counties. These data included planned future developments located within the study corridor.

### Future Land Use

**Figure 4** shows the current planned developments for each of the municipalities along the corridor. Within the corridor, six residential-based, mixed-use developments are slated for construction or actively participating in Albemarle and Greene County's development approval processes in the vicinity of US 29. These developments include:

- Village at Terrace Greene
- Cedar Run Townhomes
- Seminole Casa
- Creekside & The Village at Preddy Creek
- Judo Townhomes
- North Pointe

#### ***Village at Terrace Greene (Greene)***

The Village at Terrace Greene development is actively participating in Greene County's development approval process, so the land use mix proposed by the development is in flux. The proposed development site connects Route 670 to US 29 and sits on the east side of the corridor with

site access from Terrace Greene Circle, Route 670, Heatherton Drive, and a new site access driveway north of Terrace Greene Circle. The latest known proposal for the Village at Terrace Greene site includes:

- 282 townhomes, a movie theater, a day care, industrial space, and several retail uses.

#### ***Cedar Run Townhomes (Greene)***

The Cedar Run Townhomes development is actively participating in Greene County's development approval process. The proposed development site includes a site access to US 29 north of Keleigh Lane and sits west of the corridor. The latest known proposal for the Village at Terrace Greene site includes:

- 55 townhomes.

#### ***Seminole Casa (Greene)***

The Seminole Casa development is actively participating in Greene County's development approval process. The proposed development site sits west of US 29 between Keleigh Lane and Lake Saponi Drive. The latest known proposal for Seminole Casa includes:

- 120 apartments.

#### ***Judo Townhomes (Greene)***

The Judo Townhomes development is actively participating in Greene County's development approval process and is under review. The proposed development site sits east of US 29 off Judo Drive. The latest known proposal for the Judo Townhomes site includes:

- 165 townhomes.

### ***Creekside & The Village at Preddy Creek (Greene)***

Creekside & The Village at Preddy Creek development is actively participating in Greene County's development approval process. The proposed development sits east of US 29 with site access off Route 670 near Preddy Creek Trail Park. The latest known proposal for Creekside & The Village at Preddy Creek site includes:

- 580 townhomes and 600 single family homes.

### ***North Pointe (Albemarle)***

The North Pointe development is broken into multiple phases and is actively participating in Albemarle County's development approval process, so the land use mix proposed by the development is in flux. The proposed development site sits east of US 29 includes 2 site accesses to the corridor – one across from Northside Drive and one across from Lewis and Clark Drive. The latest known proposal for the Village at Terrace Greene site includes:

- 205 single family homes in Phase I,
- An addition of 300 apartment units in the full build.

to be constructed by 2025. The proposed Route 670 Connector Road includes:

- Constructing a new median break as a directional crossover
- Constructing a northbound right-turn lane on US 29 with 450 feet of storage
- Constructing a southbound left-turn lane on US 29 with 450 feet of storage.

### ***Lewis & Clark Drive RCUT***

An RCUT is proposed at the intersection of US 29/Lewis & Clark Drive with a new site access proposed for the North Pointe development opposite to Lewis & Clark Drive. The intersection is proposed to be reconfigured as a signalized RCUT by North Pointe's full-build analysis year of 2026.

## **Future Roadway Projects**

**Figure 5** shows the current planned roadway projects along the corridor that are approved and funded. These projects include:

- Route 670 Connector
- Lewis & Clark Drive Restricted Crossing U-Turn (RCUT)

### ***Route 670 Connector***

The Route 670 Connector will be a two-lane road connecting Route 670 to US 29 which is expected

## 3.0 INTERSECTION OPERATIONS

This section summarizes the approach and findings for traffic operations analysis under existing and future year 2045 no-build conditions. **Table 1** displays the major transportation facilities for this study.

**Table 1 Major Roadway Facilities**

| Roadway                                   | US 29                              |                               |                          |
|-------------------------------------------|------------------------------------|-------------------------------|--------------------------|
|                                           | Deerfield Dr to Albemarle Co. Line | Greene Co. Line to Camelot Dr | Camelot Dr to Airport Rd |
| Classification <sup>1</sup>               | Principal Arterial                 | Principal Arterial            | Principal Collector      |
| Number of Lanes                           | 4                                  | 4                             | 4                        |
| Speed Limit (mph)                         | 55                                 | 55                            | 45-55 <sup>2</sup>       |
| Average Annual Daily Traffic <sup>3</sup> | 24,000                             | 27,000                        | 32,000                   |
| Median                                    | Yes                                | Yes                           | Yes                      |
| Sidewalks                                 | No                                 | No                            | No                       |
| Bicycle Lanes                             | No                                 | No                            | No                       |
| On-Street Parking                         | No                                 | No                            | No                       |

<sup>1</sup> Classifications based on VDOT's 2014 Functional Classification Map.

<sup>2</sup> US 29 is only 45 mph between Airport Acres Road (S) and Airport Road.

<sup>3</sup> Average Annual Daily Traffic (AADT) based on VDOT's Virginia Roads Traffic Volume Map

### 3.1 Existing Conditions

A mixture of previous studies and data collection was used to produce traffic counts. While most traffic counts were collected in April 2021, six intersections had 2017 and 2020 volumes pulled from previous studies Village at Terrace Greene TIA and US 29 & Route 641 Study, respectively. Weekday a.m. and p.m. data were gathered for 19 study intersections along the street:

#### KEY TERMS>>

- **Operations Analysis:** An evaluation of how a roadway or set of roadways function under existing and/or anticipated traffic and geometric conditions.
- **Peak Hour:** The time of day when demand for a transportation facility is highest and the ease with which vehicles can move through the transportation facility is most limited. Weekdays typically have two peak hours (AM and PM), while weekends have a single peak hour.

- Deerfield Drive
- Matthew Mill Road (signalized)
- Heatherton Drive
- Terrace Greene Circle
- Keleigh Lane
- Commercial Entrance
- Lake Saponi Drive
- Green Edge Lane
- Frays Mill Road (signalized)
- Dickerson Road
- Austin Drive (signalized)
- Boulders Road (signalized)
- Camelot Drive
- Lewis & Clark Drive (signalized)
- U-Turn Access north of Cypress Drive
- Northside Drive
- Airport Acres Road N
- Airport Acres Road S
- Airport Road (signalized)

**Figure 6** shows the traffic count locations.

Intersection-specific peak hours were used for the analysis given the distances between intersection and the mix of land uses/contexts throughout the corridor. AM peak hours were observed to occur between 7:15 a.m. and 8:45 a.m. PM peak hours

were observed to occur between 4:00 p.m. and 6:00 p.m.

Traffic operations analyses were performed at study corridor intersections in accordance with the *Highway Capacity Manual (HCM)* using SYNCHRO 10. Due to non-National Electrical Manufacturers Association (NEMA) phasing limitations, HCM 2000 was used. **Table 2** and **Figure 7** as well as **Table 3** and **Figure 8** summarize the operational analysis for the study intersections under the weekday a.m. and p.m. peak hour existing traffic conditions, respectively. The traffic counts can be found in **Attachment A**. The full analysis can be found in **Attachment B**.

Most of the study intersections perform acceptably during each of the peak hours studied. Exceptions are described below:

## AM Existing Conditions

- Most LOS E and F movements are due to delay and are not near capacity.
- Heavy southbound through traffic
- Two intersections over capacity as measured by volume-to-capacity (v/c) ratio:
  - US 29/Frays Mill Rd over capacity:  $v/c = 1.32$
  - US 29/Airport Rd over capacity:  $v/c = 1.02$

## PM Existing Conditions

- Most LOS E and F movements are due to delay and are not near capacity.
- One intersection over capacity:
  - US 29/Airport Rd over capacity:  $v/c = 1.05$

### KEY TERMS>>

- **Delay:** The amount of time it takes vehicles to pass through an intersection (reported in seconds)
- **Level of Service (LOS):** A performance metric communicating quality of intersection service. For vehicles, LOS D indicates acceptable quality in urban conditions, while LOS scores of E-F indicate poor quality.
- **Volume-to-capacity (v/c) ratio:** A ratio comparing the number of vehicles traveling through an intersection at a given point in time to the maximum capacity of the intersection. A v/c score of 1 or higher means that an intersection is at or above capacity. A v/c score below 1 means that an intersection is below capacity.
- **95<sup>th</sup> percentile queue length:** The worst-case queue length (number of vehicles waiting in a lane) during a given time period. These queues have only a 5 percent probability of being exceeded.

Figure 6 US 29 Traffic Count Locations

## 3.2 Future No-Build Conditions

In addition to considering existing traffic operations, VDOT analyzed future traffic operations at the study corridor intersections. VDOT identified a future design year and growth rates through which they could estimate and assess the influence of increased traffic volumes on the study intersections. The growth rates were pulled from Statewide Planning System historic growth graphs and determined to be a more accurate forecast than pulling site traffic from surrounding developments.

The future operations analysis assumed a design year of 2045, future background traffic volume annual growth varies throughout the corridor:

- US 33 to Greene Co. Line: 0.63%
- Greene Co. Line to Dickerson Rd: 0.65%
- Dickerson Rd to Camelot Rd: 0.64%
- Lewis & Clark Dr to Airport Rd: 0.88%
- South of Airport Rd: 1.24%

The analysis assumed new driveways at three intersections providing an estimate of how the existing transportation network could operate in a “no build” scenario:

- Village at Terrace Greene Access (east) at US 29/Heatherton Drive
- North Pointe Access 1 at US 29/Northside Drive
- North Pointe Access 2 at US 29/Lewis & Clark Drive

Traffic operations analyses were performed at study corridor intersections in accordance with the *Highway Capacity Manual (HCM)* using SYNCHRO 10. Due to non-NEMA phasing limitations, HCM 2000 was used. **Table 4** and **Figure 9** as well as

### KEY TERMS>>

- **Design Year:** Future year used to assess how existing traffic volumes will grow and influence a transportation network
- **Growth Rate:** Rate of growth applied to existing traffic counts to estimate how traffic volumes could increase in the future

**Table 5** and **Figure 10** summarize the operational analysis for the study intersections under the weekday a.m. and p.m. peak hour future no-build traffic conditions. The full analysis can be found in **Attachment C**.

Some of the intersections studied are forecast to perform acceptably during each of the peak hours studied with exceptions described below:

### AM Future Conditions

- Eight intersections operating at LOS E or F
- Four intersections at or over capacity
  - US 29/Frays Mill Road
  - US 29/Austin Drive
  - US 29/Airport Acres Road N
  - US 29/Airport Road

### PM Future Conditions

- Six intersections operating at LOS E or F
- Five intersections at or over capacity
  - US 29/Dickerson Road
  - US 29/Boulders Road
  - US 29/Camelot Drive
  - US 29/Lewis & Clark U-Turn S
  - US 29/Airport Road

**Table 4 Future No-Build AM Conditions Operational Analysis**

| Intersection                 | Peak hour | Intersection delay (sec) and level of service <sup>1</sup> | Worst-performing movement     | Delay (sec) and level of service <sup>2</sup> | v/c <sup>2</sup> | 95 <sup>th</sup> percentile queues (feet) <sup>3</sup> |

## 4.0 BICYCLE AND PEDESTRIAN FACILITIES

This section summarizes the approach and findings of the bicycle and pedestrian facilities analysis. It outlines existing and planned facilities along the study corridor.

### 4.1 Existing Bicycle and Pedestrian Facilities

It is important for decision-makers to consider accessibility for non-motorized modes when planning. If walking and biking routes are uncomfortable and inconvenient, people are more likely to opt to drive over other modes of travel.

Industry research has shown that an average pedestrian is willing to walk five minutes, or a quarter-mile, to reach a destination. Improvements in the quality of the trip will increase the average walk distance. Convenient, comfortable walking and biking environments tend to have short blocks and a street grid, so non-motorized travelers can efficiently reach their destinations via multiple routes. Wide sidewalks, street trees, frequent crossing locations, and diverse land uses built to front the street all contribute to a safe and attractive environment where travelers will choose to walk, bike, or take transit.

Given this information, US 29 within the study limits is not a conducive environment for pedestrians and bicyclists. Existing bicycle and pedestrian facilities along the corridor are provided in the following paragraphs.

### Existing Bicycle and Pedestrian Facilities Data

Street-level bicycle and pedestrian facility data were obtained from Albemarle and Greene Counties.

### Existing Bicycle Facilities

Bicycle facilities are not present along US 29 within the study limits on either the west or east sides of the corridor. Additionally, no bicycle crossings exist. The closest facilities outside of the study area are trails within Preddy Creek Trail Park and Chris Greene Lake Park.

### Existing Pedestrian Facilities

Pedestrian facilities are not present along US 29 within the study limits on either the west or east sides of the corridor. However, at the study intersection of US 29/Airport Road, there is a sidewalk along the east side of US 29 south of Airport Road – technically outside of the study limits. Additionally, a sidewalk exists on the north side of Airport Road at the intersection. For both facilities at the southernmost study intersection though, no crossings exist here or anywhere else on the corridor within study limits.

## 4.2 Planned Bicycle and Pedestrian Facilities

Wide, connected sidewalks and comfortable bicycle facilities both contribute to an appealing bicycle and pedestrian network. **Figure 11** provides guidance on the types of facilities that are appropriate based on roadway speed and volume. Research shows that trip purpose and bicycling experience level may inform bicyclist preferences. Casual and less experienced cyclists will feel safe traveling in mixed traffic along low-speed, low-volume roadways while roadways with higher speeds and volumes may warrant a separated bicycle facility<sup>1</sup>.

The minimum speed limit along the US 29 corridor is 45 mph, with most of the study area being 55 mph. Average daily traffic volumes range between 25,000 and 32,000 (**Table 1**). Given these speeds and volumes, the most appropriate bicycle facility along US 29 would be a physically separated facility.

### Planned Bicycle and Pedestrian Facilities Data

Planned bicycle and pedestrian facility data were obtained from Albemarle and Greene Counties.

**Figure 11 Designing for Comfortable Bicycle Facilities**

Source: Montgomery County Bicycle Planning Guidance 2014.

### Planned Bicycle and Pedestrian Facilities

Albemarle County and Greene County share a long-term vision to provide increased connections and a comfortable non-motorized network throughout the region. A shared-use path is recommended along the west side of US 29 in the study area as specified in the Jefferson Area Bicycle and Pedestrian Plan and Albemarle County Comprehensive Plan.

<sup>1</sup> American Association of State Highways and Transportation Officials, *Guide for the Development of Bicycle Facilities*, Fourth Edition, 2012, p. 15.

## 5.0 TRANSIT FACILITIES

Two transit services run in the vicinity of the US 29 study area in Albemarle and Greene Counties – Charlottesville Area Transit (CAT) and JAUNT.

The sections that follow provide a brief description of the transit alignment, frequency, and span for each service nearest to the study area.

### Charlottesville Area Transit

CAT is the City of Charlottesville's transit system, providing fixed-route services into Albemarle County. CAT services eleven (11) routes plus a free trolley service between Downtown and UVA.

No route currently runs along US 29 within the study corridor. Bus Routes 5 and 7 provide the northernmost access of the transit system to the Walmart located 2.5 miles south of Hollymead Town Center and 3 miles south of Airport Road. Route 5 services this bus stop Monday through Saturday. Route 7 currently services this stop on Sundays but is proposed to be added to Route 7 for all days of the week. The existing CAT network is provided in **Figure 12**, while the proposed CAT network (including full Route 7 service to the Walmart) is provided in **Figure 13**.

**Figure 12 Existing CAT Network**

Source: CAT System Optimization Plan, 2021.

**Figure 13 Proposed CAT Network**

Source: CAT System Optimization Plan, 2021.

## JAUNT

JAUNT provides on-call transit, regional commuter, and paratransit service in Greene and Albemarle Counties. Its services in relation to the study area include:

- 29 North CONNECT
- Charlottesville Link Service

JAUNT's CONNECT routes are primarily for commuters into the City of Charlottesville. The 29 North CONNECT route spans from Hollymead Town Center in Albemarle County to UVA's Health System and Downtown. The northernmost bus stop on this route is the Hollymead Food Lion, on the east side of US 29 approximately 900 feet south of Airport Road. The 29 North route operates Monday through Friday.

Charlottesville Link Service is an alternate way to transit to the City of Charlottesville. This is an on-demand service with pick-up and drop-off locations anywhere in Greene County operating Monday through Friday. Reservations are required one day in advance.

# 6.0 SAFETY

This section summarizes the approach and findings of the crash analysis. The material below discusses study corridor crash patterns and trends; network screening; and the systemic safety evaluation. The analysis focuses on the study corridor only (US 29 between Deerfield Drive and Airport Road).

## 6.1 Key Findings

### Crash Patterns and Trends

- Over half of reported crashes were rear-end crashes (61%).
- Injuries and fatalities accounted for 33% of reported crashes.
- From 2015 to 2020, the top three crash types were rear end (61%), angle (11%), and fixed object – off road (9%).
- Intersection crashes (61%) outnumber segment crashes (39%).

### Network Screening and Systemic Findings

- VDOT screened the roadway network using: (1) the Equivalent Property Damage Only (EPDO) safety performance measure; and (2) a risk-based analysis to determine roadway characteristics potentially associated with high crash locations.
- The EPDO performance measure identifies locations that have exhibited a combined greater severity and frequency of crashes than other locations. It gives more weight to locations at which more severe crashes have occurred.

### KEY TERMS>>

- **Network Screening** –Evaluating the entire street network to identify high-crash locations based on number of crashes, severity of crashes, and traffic volume.
- **Systemic Analysis** – Identifying common characteristics associated with high-crash locations and prioritizing locations based on common characteristics and crash history.

**Common characteristics of high-crash intersections identified through the systemic analysis included:**

- Mostly signalized intersections
- High-speed (45 mph) approaches to the intersection
- No marked pedestrian crossings

**VDOT identified the following priority locations:**

- US 29 and Deerfield Drive
- US 29 and Heatherton Drive
- US 29 and Boulders Road
- US 29 and Lewis & Clark Drive
- US 29 and Matthews Mill Road
- US 29 and Austin Drive

## 6.2 Study Corridor Crash Patterns and Trends

The following presents study corridor crash trends and patterns. Findings from this section will be used to inform consideration for countermeasures and multimodal transportation solutions that could be effective along the study corridor.

### Data and Approach

The most recent six years of complete crash data available for the US 29 study corridor and surrounding area were obtained and analyzed from VDOT's database. The crash data used were from January 1, 2015 to December 31, 2020; there were 798 reported crashes in this period. The location data were used to geocode the crashes and map them in GIS software.

### Findings

Crash patterns and trends in the corridor data were identified by evaluating the following:

1. **Crash severity**
2. **Crash type**
3. **Lighting**
4. **Weather condition**
5. **Year**

In the six years of data analyzed, less than 1 percent of reported crashes involved pedestrians and bicyclists (three crashes). The rest of the reported crashes involved motor vehicles or motor vehicles and other objects (see **Figure 14**). Rear-end and angle were the top two crash types. VDOT will use these findings to help identify and prioritize safety treatments.

### Severity

**Table 5** summarizes the reported crashes by severity. Injury crashes are organized by severe injuries, other visible injuries, and injuries involving a complaint of pain but no visible injury.

**More than half (67%) of crashes recorded resulted in property damage only.**

**Three (<1%) crashes resulted in fatalities, and 35 crashes (4%) resulted in severe injury.**

**Table 5 Crash Severity, January 2014 – December 2018**

| Crash Severity             | Crash Count |
|----------------------------|-------------|
| Fatal                      | 3 (<1%)     |
| Injury (severe)            | 35 (4%)     |
| Injury (other visible)     | 121 (15%)   |
| Injury (complaint of pain) | 108 (14%)   |
| Property damage only (PDO) | 531 (67%)   |

Source: VDOT, Kittelson 2021.

### Crash Type

**Figure 14** identifies the crash types of the reported crashes.

**Figure 14 Vehicle Crash Types, January 2015 – December 2020**

\*\*"Other" includes non-collision (12), fixed object – in road (4), head on (2), pedestrian (2), backed into (2), and crash types that were categorized as "Other" (17) in the data.  
Source: VDOT, Kittelson 2021.

**Rear end (61%) and angle (11%) crashes represent the largest proportions of crash types.**

**Rear end (486 total crashes) and angle (90 total crashes) make up more than half of all crash types.**

**Figure 15** summarizes reported crashes by crash type and severity.

**Figure 15 Reported Crashes by Crash Type and Severity, January 2015-December 2020**

\*\*"Other" includes non-collision (12), fixed object – in road (4), head on (2), pedestrian (2), backed into (2), and crash types that were categorized as "Other" (17) in the data.  
Source: VDOT, Kittelson 2021.

**There were three fatal injuries along the study corridor. All three fatal injuries involved pedestrians.**

### Lighting

**Figure 16** displays the study corridor crash count by reported lighting condition.

**Figure 16 Percent of Reported Crashes by Lighting, January 2015 – December 2020**

Source: VDOT, Kittelson 2021.

The majority of crashes (75%) occurred under daylight conditions.

Of the crashes that occurred in dark conditions, more crashes occurred in locations without street lights (18%).

### ***Roadway Surface Condition***

Figure 17 displays the study corridor crash count by reported roadway surface condition.

**Figure 17 Crashes by Roadway Surface Condition, January 2015 – December 2020**

Source: VDOT, Kittelson 2021.

The majority of crashes (83%) occurred under dry conditions.

### ***Crash Year***

Figure 18 summarizes the crash count and severity of crashes by year.

2018 had the highest crash count (171).

The number of annual crashes has generally increased since 2015, consistent with observed growth in average annual daily traffic (AADT). However, AADT declined significantly in 2020 due the COVID-19 pandemic resulting in less crashes in 2020 than in previous years.

**Figure 18 Crashes by Year, January 2015 – December 2020**

Source: VDOT, Kittelson 2021.

## Districtwide Ranking

Using the latest *Highway Safety Manual (HSM)* methods, VDOT conducts a roadway network screening process to identify intersections and segments with Potential for Safety Improvement (PSI). The comparison allows cities and counties to identify local “hot spots” relative to peers. A number 1 ranking indicates the worst performer relative to other peers in the group. Intersections or segments that have a positive PSI value in three or more years are further highlighted as Target Safety Need (TSN) locations. This section presents relevant PSI and TSN rankings for VDOT’s Culpeper District between 2015 and 2020.

Two intersections and three segments along the study corridor were highlighted in the Culpeper District list of PSI locations (**Figure 19**):

**US 29 and Frays Mill Road (PSI District Rank: 12)**

**US 29 and Lewis & Clark Drive (PSI District Rank: 20)**

**US 29 from Heatherton Drive to Matthews Mill Road (PSI Rank: 90)**

**US 29 from Matthews Mill Road to Deerfield Drive (PSI Rank: 93)**

**US 29 from Camelot Drive to Austin Drive (PSI Rank: 127)**

Figure 19 Potential for Safety Improvement (PSI) Locations

## 6.3 Network Screening and Systemic Findings

This section describes the network screening and systemic evaluation of the study corridor roadway network. First, the data and approach used to screen the study corridor roadway network and identify potential systemic crash characteristics are described.

### Data and Approach

VDOT identified the high-priority safety intersections using the EPDO network screening performance measure from the *HSM*. The EPDO screening calculation was performed for all intersections along the study corridor. The EPDO performance measure is described below.

#### ***Equivalent Property Damage Only***

The EPDO performance measure assigns weighting factors to crashes by severity relative to PDO crashes. The weighting factors used for the network screening are based on the crash costs by severity used for Caltrans' Highway Safety Improvement Program Benefit Calculator Tool. Crash costs vary based on location type: signalized intersection, unsignalized intersection, or roadway. The weights for each crash severity by location type are shown in **Table 6**.

**Table 6 Crash Weights by Severity and Location Type**

| Crash Weights by Location Type | Location Type              | Signalized Intersection | Unsignalized Intersection |
|--------------------------------|----------------------------|-------------------------|---------------------------|
|                                | Fatal                      | 126                     | 200                       |
| Crash Weights by Location Type | Injury (Severe)            | 126                     | 200                       |
|                                | Property Damage Only (PDO) | 1                       | 1                         |

|                            |       |       |
|----------------------------|-------|-------|
| Injury (Other Visible)     | 10.86 | 10.86 |
| Injury (Complaint of Pain) | 6.13  | 6.13  |
| Property Damage Only (PDO) | 1     | 1     |

Source: Caltrans, Highway Safety Improvement Program Benefit Calculator Tool, 2016.

The weights generally reflect an order of magnitude difference between the societal costs of fatal and severe injury collisions and non-severe injury collisions. The weighting factors intentionally weigh fatal and severe injuries equally to recognize that the difference between a severe injury crash and a fatal crash is often more of a function of the individuals involved – therefore, both represent locations where VDOT may want to prioritize improvements. The crash weights vary by location type due to the relative costs associated with the crash severity at those location types. Hence, fatal or severe crashes at an unsignalized intersection result in more persons injured or more severely injured in a fatal or severe injury crash and as a result have a higher average cost than at a signalized intersection.

Reported crashes were first coded by severity. Crashes within 250 feet of an intersection were then spatially joined and summarized in ArcGIS to develop the total number of crashes by severity at each intersection. Where intersections were less than 500 feet from each other, crashes were assigned to the nearest intersection. Crashes occurring more than 250 feet from an intersection were excluded from the intersection analysis.

The EPDO score for intersections was calculated by multiplying each crash severity total by its associated weight (by intersection type) and summing the results, using the following formula:

*EPDO Score = Fatal weight \* # of fatal crashes + severe injury weight \* # of severe injury crashes + other visible injury weight \* # of other visible injury crashes + complaint of pain injury weight \* # of complaint of pain injury weight crashes + PDO crashes*

The EPDO score was then annualized by dividing the score by the number of years (six) of crash data used in the analysis.

### **Identifying Common Characteristics of High-Crash Intersections**

VDOT applied a risk-based analysis of the priority locations identified through the intersection network screening. Risk is defined in this instance as common traffic or physical characteristics shared by the priority intersections.

To determine common crash characteristics, VDOT reviewed the following roadway characteristics for priority sites to help determine common crash characteristics for intersections:

- ▶ Number of vehicle lanes
- ▶ Posted speed
- ▶ Median presence
- ▶ Driveway and curb cut presence
- ▶ Intersection control type
- ▶ Dedicated left- or right-turn lane presence
- ▶ Intersection geometry (i.e., presence of offset approaches or intersection skew, number of approaches)
- ▶ Presence of marked crosswalks

For the highest-scoring intersections, roadway characteristic data was collected through a review of aerial imagery and a field visit. This included assessing the number of approaches, shoulder widths, and turn lane configurations, among other items.

VDOT identified consistent trends across the priority locations that could be tied to a roadway characteristic. These were documented as common crash characteristics. Common characteristics of high-crash intersections are discussed in the Findings section below.

## **Findings**

After calculating the network screening performance measures, VDOT identified priority intersections using the annualized EPDO scores. For intersection locations, the EPDO scores ranged from 3.0 (three crashes during the six-year time frame analyzed) to 662.4. **Figure 20** shows the results of the EPDO scoring by quartile for roadway intersection locations.

The results of the network screening analysis show that intersections with a reported crash history are primarily signalized, with the exceptions of the intersections at Deerfield Drive and at Heatherton Drive. One fatal injury occurred at the intersection of US 29 and Deerfield Drive and two fatal injuries occurred at US 29 and Heatherton Drive. VDOT developed its list of priority intersections using the highest-scoring EPDO intersections. The complete list of corridor intersections is given, along with their corresponding EPDO scores, in **Table 7**.

**Table 7 Intersection EPDO Scoring results**

| Intersection                              | Annualized Equivalent PDO Score | Intersection Control |
|-------------------------------------------|---------------------------------|----------------------|
| <b>Priority Intersections<sup>2</sup></b> |                                 |                      |
| US 29 & Deerfield Drive                   | 662.4                           | Unsignalized         |
| US 29 & Heatherton Drive                  | 640.6                           | Unsignalized         |
| US 29 & Boulders Road                     | 599.0                           | Signalized           |
| US 29 & Lewis and Clark Drive             | 532.7                           | Signalized           |
| US 29 & Matthew Mills Road                | 461.6                           | Signalized           |
| US 29 & Austin Drive                      | 356.4                           | Signalized           |
| <b>Other Corridor Intersections</b>       |                                 |                      |
| US 29 & Airport Road                      | 339.8                           | Signalized           |
| US 29 & Frays Mill Road                   | 280.2                           | Signalized           |
| US 29 & Northside Drive                   | 253.6                           | Unsignalized         |
| US 29 & U-Turn Access                     | 231.1                           | Unsignalized         |
| US 29 & Camelot Drive                     | 67.83                           | Unsignalized         |
| US 29 & Commercial Entrance               | 65.7                            | Unsignalized         |
| US 29 & Terrace Greene Circle             | 37.6                            | Unsignalized         |
| US 29 & Dickerson Road                    | 35.9                            | Unsignalized         |
| US 29 & Greene Edge Lane                  | 34.9                            | Unsignalized         |
| US 29 & Lake Saponi Drive                 | 16.86                           | Unsignalized         |

| US 29 & Airport Acres North               | 3.0                             | Unsignalized         |

Source: VDOT, Kittelson 2021.

<sup>2</sup> A minimum EPDO score of 350 was selected as the criterion for priority corridor intersections.

### ***Common Characteristics of High-Crash Intersections***

Based on the review of the identified trends in roadway characteristics that were indicative of more crashes in the priority intersections, VDOT identified the following common characteristics:

- ▶ Mostly signalized intersections
- ▶ High-speed (45 mph) approaches to the intersection
- ▶ No marked pedestrian crossings

Figure 20 Intersection EPDO Scoring results by Quartile

Source: VDOT, Kittelson 2021.

## 6.4 Priority Locations

### Priority Locations

Priority intersections were drawn from the network screening and finalized based on discussions with VDOT and the project Stakeholder Group. The following six intersections were selected as the priority locations because they experienced the most severe crashes along the study corridor:

- ▶ US 29 and Deerfield Drive
- ▶ US 29 and Heatherton Drive
- ▶ US 29 and Boulders Road
- ▶ US 29 and Lewis & Clark Drive
- ▶ US 29 and Matthews Mill Road
- ▶ US 29 and Austin Drive

### Location-Specific Analysis Approach

To help inform selection of the focus sites, VDOT refined the corridor-wide crash pattern and trends analysis to focus on the individual priority intersections. This approach allows for a more nuanced understanding of how each priority intersection's safety performance varies across the study corridor. This refined understanding of the individual crash patterns and trends for each location will assist in developing a crash profile for each site that can be used to select appropriate safety treatments to improve safety performance.

This extraction process resulted in a focused crash data set of 251 priority intersection-related crashes. These 251 crashes account for 31% of all reported crashes on the US 29 corridor. Of these 251 crashes, 3 were fatal injury crashes and 29 were

severe injury crashes, accounting for 100% of all reported fatal injury crashes and 83% of severe injury crashes on the US 29 corridor. More detailed summaries of key crash characteristics are discussed below.

### Priority Locations Findings

This section discusses crash trends at the priority intersections, highlighting notable differences between patterns in a specific intersection and the corridor-wide patterns previously discussed. The analysis includes the following considerations:

- ▶ Crash severity
- ▶ Crash type
- ▶ Crash lighting conditions
- ▶ Crash weather condition
- ▶ Crash year

#### *Crash Severity*

**Table 8** summarizes reported crashes by priority intersection and severity.

The three fatal injury crashes occurred at two intersections. Two fatal injury crashes occurred at US 29 and Heatherton Drive and one fatal injury crash occurred at US 29 and Deerfield Drive.

All the priority intersections had at least one fatal or severe injury crash.

US 29 and Boulders Road had the most crashes of the study intersections (69 crashes). 65% of crashes at US 29 and Boulders Road resulted only in property damage. Therefore, the EPDO score was not as high as intersections that had less crashes, but more severe injury crashes.

#### *Crash Type*

The most common crash types at the priority locations are the following:

- ▶ Rear-end crashes (71%)
- ▶ Angle crashes (17%)
- ▶ Fixed object – off road (4%)

**Figure 21** summarizes crash types at each of the priority intersections.

**Table 8 Priority Locations Crashes by Intersection and Severity, January 2015 to December 2020**

| Intersection                  | Fatal Crashes | Severe Injury Crashes | Other Visible Injury Crashes | Complaint of Pain Injury Crashes | PDO Crashes | Total Crashes |
|-------------------------------|---------------|-----------------------|------------------------------|----------------------------------|-------------|---------------|

**Figure 21 Priority Locations Crash Type by Intersection, January 2015 to December 2020**

Source: VDOT, Kittelson, 2021.

- ▶ Rear end crashes represent a higher proportion of crashes compared to the corridor-wide average at five of the priority intersections:
  - US 29 and Heatherton Drive
  - US 29 and Boulders Road
  - US 29 and Lewis & Clark Drive
  - US 29 and Matthews Mill Road
  - US 29 and Austin Drive
- ▶ Angle crashes represent a higher proportion of crashes compared to the corridor-wide average at three of the priority intersections:
  - US 29 and Deerfield Drive
  - US 29 and Boulders Road
  - US 29 and Matthews Mill Road
- ▶ A pedestrian-involved crash occurred at two of the priority intersections:
  - US 29 and Deerfield Drive
  - US 29 and Heatherton Drive

### ***Crash Lighting Conditions***

As already discussed, most crashes on US 29 occur during daylight conditions. **Figure 22** summarizes crashes by lighting condition at each of the priority intersections.

- ▶ Daylight crashes represented the highest proportion of crashes on the priority intersections.
- ▶ Dark condition crashes (dusk-dawn, dark-streetlights, and dark-no streetlights) represent 20% of crashes at priority intersections.

**Figure 22 Reported Crashes by Lighting Condition, January 2015 to December 2020**

Source: VDOT, Kittelson, 2021.

### ***Crash Roadway Surface Condition***

As already reported, most crashes on US 29 involved dry roadway surface conditions. **Figure 23** summarizes crashes by roadway surface condition at each of the priority intersections.

- ▶ Dry roadway surface conditions characterized the highest proportion of crashes on the priority intersections.
- ▶ Wet roadway surface conditions (wet, snowy, icy, slushy) characterized a higher proportion of crashes compared to the corridor-wide average at two of the priority intersections:
  - US 29 and Lewis & Clark Drive
  - US 29 and Austin Drive

### ***Crash Year***

As previously discussed, the most crashes occurred in 2018 along the US 29 corridor. Since 2018, crashes have declined slightly along the corridor. A similar pattern is shown at the priority intersections. **Figure 24** summarizes crashes by year at each of the priority intersections.

- ▶ More 2018 crashes occurred at four of the priority intersections compared to the corridor-wide average for 2018 crashes:
  - US 29 and Boulders Road
  - US 29 and Lewis & Clark Drive
  - US 29 and Matthews Mill Road
  - US 29 and Austin Drive

## 7.0 CONCLUSION AND NEXT STEPS

The findings in this memorandum will inform the processes for refining the study goals, objectives, and evaluation criteria. VDOT will use insights from the existing conditions analysis to develop potential transportation alternatives that will help meet the vision and goals of the study. These transportation alternatives will be evaluated and revised based on the study evaluation measures and community input.

## Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.

Queue shown is maximum after two cycles.

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

## Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.

Queue shown is maximum after two cycles.

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

## Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.

Queue shown is maximum after two cycles.

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

## Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.

Queue shown is maximum after two cycles.

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.
